About Potash West

Potash West (ASX:PWN) is an exploration company focused on developing potassium-rich glauconite deposits in West Australia's Perth Basin. The Company aims to define a substantial resource base and investigate how best to recover potash from the mineral. The project is well situated in relation to infrastructure, with close access to rail, power and gas. A successful commercial outcome will allow the Company to become a major contributor to the potash and phosphate markets at a time of heightened demand.

The Company has a major land holding over one of the world's largest known glauconite deposits, with exploration licenses and applications covering an area of 2,700km². Previous exploration indicates glauconite sediments are widespread for more than 150km along strike and 30km in width. Current JORC complaint Indicated Mineral Resources stand at 241Mt at 3.0% K₂O, including 120Mt at 4.6% K₂O amenable to processing by the K-Max process and 90Mt at 2.65% P₂O₅ of phosphate mineralisation.
